Your score: 80 / 100

QUESTIONS

LEVEL 3 — HARD

Q1

function

Q2

functionsandpointers

2 / 2 saved

Level 3 — Hard findMax (H) — functionsandpointers

Write a function `int findMax(int *arr, int n)` that finds the maximum element in an array using pointers.

Sample Input:

Enter the size of the array: 5

Enter the elements of the array: 10 20 30 40 50

Sample Output:

Maximum element is 50

Your Code

```
1 #include <stdio.h>
2
3 int findMax(int *arr, int n)
4 {
5     int max = *arr;
6
7     for (int i = 1; i < n; i++)
8     {
9         if (*(arr + i) > max)
```

Program Input (stdin)

Enter input if required...

Output

```
Enter the size of the array: Enter the
elements of the array: Maximum element is
50
```

Level 3 — Hard **sort (H)** — function

Write a function void mergeSortedArrays(int arr1[], int n1, int arr2[], int n2, int merged[]) that merges two sorted arrays arr1 and arr2 into a single sorted array merged.

Sample Input:

Enter the size of first array: 3

Enter the elements of first array: 1 3 5

Enter the size of second array: 3

Enter the elements of second array: 2 4 6

Sample Output:

Merged sorted array: 1 2 3 4 5 6

Your Code

```
1 #include <stdio.h>
2
3 void mergeSortedArrays(int arr1[], int n1, int arr2[], int
4 {
5     int i = 0, j = 0, k = 0;
```

Program Input (stdin)

Enter input if required...
